THE CFO HQ

Cyber resilience for leadership teams

A CFO-led approach to controls, business interruption and recovery

hello@thecfohq.com

Understand what disruption costs

Start with the services customers and the business rely on.

Map dependencies

Identify material services, owners, suppliers and recovery priorities.

Quantify exposure

Model interruption, lost contribution and response costs using your assumptions.

Prioritise spend

Compare potential risk reduction with the cost of controls and ongoing coverage.

Match support to the control gap

Agree scope, responsibilities and exclusions as part of discovery.

Governance review

Assess control ownership, evidence and the board’s reporting needs.

Managed security

Define monitoring coverage, handoffs and escalation with your IT team.

Response and recovery

Agree response leads, recovery priorities and evidence of recent testing.

Set up governance for delivery

Give management a decision pack and the operating team a clear scope.

Discover

Map control gaps, current providers and business deadlines.

Mobilise

Agree service levels, roles, coverage and acceptance criteria.

Review

Monitor service performance and report open decisions and residual risk.
